

Almost global - but closer than ever before

At Expanite we have always described ourselves as being small but with big ambitions; we want to offer the best in surface hardening of stainless steel to our customers, we want to offer the best service and we want to do all this wherever our customers are located.

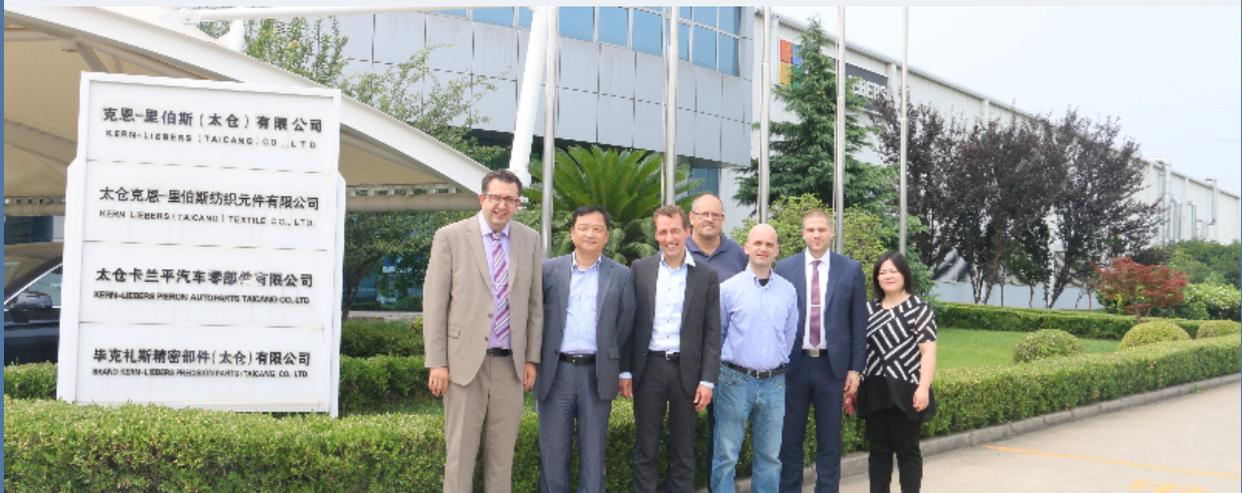

Since our foundation in 2010 we have had two pillars in our strategy: (1) we want to have a series of treatment centers strategically located to service our customers in the regions where they need us to be, and (2) for those customers who either has the volume or where hardening is strategically important, we want to offer license agreements, which enables them to install equipment and thereby run an efficient lean production.

As you can read below, Expanite will very soon be able to offer our technologies on three continents: Europe, North America and Asia – either directly or via license agreements. We are quite excited about this achievement and will do our best to convert it in to the benefit of our customers.

This fall is full of activities for Expanite, and more exciting news will follow in the coming months. We are looking forward to servicing you.

Thomas Abel Sandholdt
Expanite A/S

Update about Expanite in Asia

As previously mentioned, Expanite will soon be available in Asia – more precisely in Taicang China. Based on a license agreement, the global supplier of precision parts KERN-LIEBERS will install equipment capable of executing Expanite processes at their Taicang facility.

By this move, Expanite will be the first supplier of stainless steel surface hardening who can offer the same unique product in Asia, Europe and the US –all with focus on quality, lead-time and cost.

Expanite in Asia

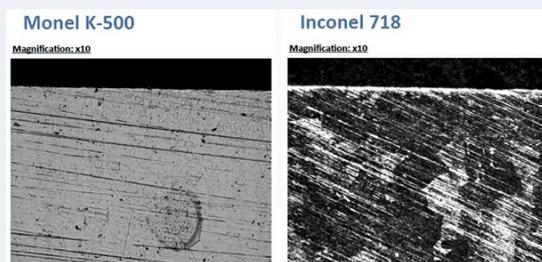

New board member at Expanite

As a natural part of constantly wanting to strengthen the organisation on all levels, Expanite has recruited Per Rud as new non-executive board member. Mr. Rud's long and in-depth experience in global business development, sales and marketing shall contribute to maintain high growth on the current path.

Technical insight - Expanite is hardening parts in Monel & Inconel

In connection with a global supplier to the pump and valve industries, Expanite has developed hardening solutions for parts in austenitic nickel-chromium-based alloys such as Inconel 718 and nickel-based alloys as Monel K500 – with the purpose of improving wear resistance and effectively preventing galling.

Meet Benjamin - our new team member in Germany

Expanite is growing – due to increasing business from new and existing customers – and customers from around the globe. To cope with this growth, we have added Benjamin Holler as production lead in our Frickenhausen facility.

Furnace squeezed out

To balance our production capacity between our treatment centers in Europe, we recently moved one of our smaller furnaces from our treatment center in Hillerød, Denmark to our treatment center in Frickenhausen, Germany. And the furnace just barely made it through our doors...

Drinktec Messe 2017

Expanite was exhibiting at Drinktec 2017 in Munich – one of the world's biggest trade fair for the beverage and liquid food industry. We would like to take the opportunity to thank all those who took the time and visited our booth at the Danish Pavilion. This includes new as well as existing contacts.

FAQ

At Expanite we collected a great deal of experience and knowledge within stainless steel surface hardening, heat treatment, materials and applications. We crafted this FAQ to answer many of the frequently asked questions that we have experienced over the last years. Feel free to let us know if you're missing something - we're always active on info@expanite.com.
